HOOK

Your frontâ□□end may be draining your budget

Why the shiny framework you love could be costing you more than you think

- Large bundles increase CDN and bandwidth spend
- Runtime overhead raises serverâ□□side rendering costs
- Frequent updates demand more dev time
- Complexity leads to hidden technical debt

WHAT & WHY

The rise of heavyweight JS stacks

Whatâ□□s driving the surge in frontâ□□end compute and maintenance costs?

- Modern frameworks ship with many default features
- Rich UI libraries add megabytes to every page
- Tooling (Webpack, Vite) creates multiple build artifacts
- Teams often adopt without measuring actual impact

AUDIT STEP 1

Measure bundle size and load impact

Start with data, not assumptions

- Use Lighthouse or WebPageTest to capture payload sizes
- Track bandwidth usage per page view in your cloud bill
- Compare against a minimal baseline (e.g., vanilla JS)
- Log the cost per GB of data transfer for your provider

AUDIT STEP 2

Quantify runtime compute

How much CPU does your frontâ□□end really need?

- Instrument serverâ□□side rendering times per request
- Map CPU seconds to your cloud providerâ□□s pricing
- Identify spikes caused by heavy hydration or SSR loops
- Record the average cost per page render

AUDIT STEP 3

Assess maintenance overhead

Developer time is a real expense

- Count weekly hours spent on framework upgrades
- Track bugs linked to framework internals
- Estimate the cost of onboarding new devs to the stack
- Add the hourly rate to get a maintenance budget

TAKEAWAY

Simplify for savings

Practical actions you can take today

- Trim unused modules with treeâ⊠⊠shaking or importâ⊠⊠only builds
- Consider lighter alternatives (e.g., Preact, Alpine) for static sites
- Set a bundleâ⊠⊠size budget and enforce it in CI
- Schedule a quarterly audit to catch drift early

CTA

Ready to cut frontâ□□end waste?

Letâ□□s audit your stack together

- Message me for a free 30â□□minute costâ□□analysis
- Get a prioritized list of quick wins
- Turn insights into a lean, maintainable architecture
